

**DESCRIPTION**

This watershed flows into the 'Western Santa Catalina Island' Area of Special Biological Significance (ASBS). This is a relatively small ASBS with 4 miles of coastline, extending from the north end of Little Harbor to Ben Weston Point. This area is primarily used by islanders and boaters, and has areas for camping, picnicking, hiking, and surfing.

There are three direct discharges of runoff and 5 natural streams draining this area. A road runs along part of the coastline of this ASBS, and may contribute to storm water runoff; portions of the road are annually paved with oil slurry that may be discharged into the ASBS. The City of Avalon is not immediately adjacent to this ASBS.

**REASON FOR CCA IDENTIFICATION**

This watershed flows into the 'Western Santa Catalina Island' Area of Special Biological Significance (ASBS), which is a State Water Quality Protection Area.
